

## The Best Only Gets Better!

### Nervo-Scope® ETS-9A

The Nervo-Scope® by EDL has been the industry standard in chiropractic thermal detection since it hit the market in the 1950s. It has been through constant refinement and improvement and still remains at the top.

EDL is pleased to announce the Nervo-Scope® ETS-9A, the most refined, cutting edge version of the Nervo-Scope® ever produced.

The ETS-9A features the same finely-tuned sensors the brand is famous for--still accurate to within 0.02°F! --and adds wireless data capture that will work with the new Analagraph.

Take your practice and the care and comfort of your clients to the next level. Get your first Nervo-Scope®--or upgrade today!

## The History of the Nervo-Scope®

Nervo-Scope® by Electronic Development Laboratories, Inc. (EDL) is the most trusted and known instrument in the Chiropractic field.

The Nervo-Scope® instrument is used in most clinical trials and taught in most Technique classes. The actual Nervo-Scope design was fashioned after the original Neurocalometer by B. J. Palmer.

Nervo-Scope® instruments have been handmade for over 70 years and they will always be handmade. All Nervo-Scope® instruments are made and tested in our facility in Danville, Virginia. We take pride in knowing that we manufacture the best instrument that money can buy. EDL, Inc. still maintains a repair facility that tries to repair all instruments that are sent in.

At EDL, Inc. there is a time-honored tradition of listening to the Chiropractic community and trying to do what is right for you.

**“The Gonstead Clinic has a long history with EDL. Dr Gonstead said that instrumentation is essential in finding and monitoring Vertebral Subluxations. His favorite was the Nervo-Scope and we still use it here on every patient.”**

**-Dr. Thomas Potisk,**  
President of Gonstead Clinic

The Temperature People® - Since 1943

**Why are Nervo-Scope® instruments found in most of Chiropractic's most prodigious schools and in major clinics throughout the world?**

**High Sensitivity • High Noise Immunity  
Fast Response • High Reliability  
Stable Readings • Proven Track Record  
CE Mark Certified • Multiple Sensitivities • Auto Power • Safe Fully Adjustable**

The Nervo-Scope's® easy to read dial shows real-time differences during the reading.

## The Wireless Analagraph

The Wireless Analagraph® was designed based on feedback from a worldwide survey of Chiropractors who were willing to share their input and vision on what they needed to see in this newest addition to our chiropractic product line.

The Wireless Analagraph® is backwards compatible with all of the ETS-7, ETS-8, and of course the current ETS-9A Nervo-Scope® models. It offers real time response and the ability to overlap graphs. It is completely wireless and allows the doctor to set levels for the severity of the subluxation. All readings are correlated to location (along numbered vertebrae of the spine) for easier analysis and patient understanding.
