

## The Best Only Gets Better!

### Updated for 2018: Nervo-Scope® ETS-9A

The Nervo-Scope® by EDL has been the industry standard in chiropractic thermal detection since it hit the market in the 1950s. It has been through constant refinement and improvement and still remains at the top.

EDL is pleased to announce the Nervo-Scope® ETS-9A, the most refined, cutting edge version of the Nervo-Scope® ever produced.

The ETS-9A features the same finely-tuned sensors the brand is famous for--still accurate to within 0.02°F! --and adds wireless data capture that will work with the new Analagraph.

Take your practice and the care and comfort of your clients to the next level. Get your first Nervo-Scope®--or upgrade today!

## The History of the Nervo-Scope®

Nervo-Scope® by Electronic Development Laboratories, Inc. (EDL) is the most trusted and known instrument in the Chiropractic field.

The Nervo-Scope® instrument is used in most clinical trials and taught in most Technique classes. The actual Nervo-Scope design was fashioned after the original Neurocalometer by B. J. Palmer.

Nervo-Scope® instruments have been handmade for over 70 years and they will always be handmade. All Nervo-Scope® instruments are made and tested in our facility in Danville, Virginia. We take pride in knowing that we manufacture the best instrument that money can buy. EDL, Inc. still maintains a repair facility that tries to repair all instruments that are sent in.

At EDL, Inc. there is a time-honored tradition of listening to the Chiropractic community and trying to do what is right for you.

**“Using the new Nervo-Scope® is very familiar .... and now with the integrated wireless data, I can capture highly accurate thermal readings for pre and post adjustments. It’s a great benefit for my patients and for me.”**

**- Dr. Verdi Bray  
CHIROPRACTOR**

**Electronic Development Labs, Inc.**

**Why are Nervo-Scope® instruments found in most of Chiropractic’s most prodigious schools and in major clinics throughout the world?**

**High Sensitivity • High Noise Immunity  
Fast Response • High Reliability  
Stable Readings • Proven Track Record  
CE Mark Certified • Multiple Sensitivities • Auto Power • Safe Fully Adjustable**

**The Nervo-Scope’s® easy to read dial shows real-time differences during the reading.**

## Coming 2019 - The New Analograph

The new Analograph is being designed based on a survey of Chiropractors throughout the globe who were willing to share their input and vision on what they needed to see.

We are proud to have received such a positive response from the Chiropractic community and are hoping to release it in early 2019. Our main goal in producing the new Analograph is to make it backwards compatible with all of the ETS-7s, ETS-8s and of course the current ETS-9As.

The Analograph will have real time response and the ability to overlap graphs. It will be wireless and allow the doctor to set levels for the severity of the subluxation. All readings will be correlated to location for easier analysis.
